

# SPECTRUM C O N T R O L S

December 14, 2020

## Announcing: HTML5 Firmware Update Utilities for InView Communications Modules and 2080sc-BAC Communications Module.

Spectrum Controls announces two Firmware Update Utilities to assist customers with the Flash to HTML5 update beyond the Flash End-of-Life (EOL) date of December 31<sup>st</sup>, 2020.

Earlier in 2020, Spectrum Controls announced HTML5 User Interface updates that removed the dependency on Flash technology for the InView Communications Modules and Micro800™ BACnet Communications Module (2080sc-BAC). Customers who have not installed the Flash to HTML5 update prior to December 31<sup>st</sup>, 2020 will be unable to access the browser-based User Interface of their Comms Modules and will need to use the appropriate Firmware Update Utility to re-enable this access.

InView Comms Modules shipped after May 1<sup>st</sup>, 2020 include the HTML5 firmware update. 2080sc-BAC Modules shipped after October 7<sup>th</sup>, 2020 include the HTML5 firmware update.
