

December 14, 2020

Announcing: HTML5 Firmware Update Utilities for InView Communications Modules and 2080sc-BAC Communications Module.

Spectrum Controls announces two Firmware Update Utilities to assist customers with the Flash to HTML5 update beyond the Flash End-of-Life (EOL) date of December 31st, 2020.

Earlier in 2020, Spectrum Controls announced HTML5 User Interface updates that removed the dependency on Flash technology for the InView Communications Modules and Micro800™ BACnet Communications Module (2080sc-BAC). Customers who have not installed the Flash to HTML5 update prior to December 31st, 2020 will be unable to access the browser-based User Interface of their Comms Modules and will need to use the appropriate Firmware Update Utility to re-enable this access.

InView Comms Modules shipped after May 1st, 2020 include the HTML5 firmware update. 2080sc-BAC Modules shipped after October 7th, 2020 include the HTML5 firmware update.
